DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Objections

Claims 4-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-10 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

Claims 1, 3, 11, 13-15, 17-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burger, U.S. Patent 3,951,771 in view of Prestridge, U.S. Patent 4,116,790.

Burger discloses the claimed method of removing particulate solids from an oil based fluid comprising the step of exposing the fluid to an electric field and then collecting the solids (see abstract). The burger patent further teaches the use of the centrifuge to remove the water and solids therefrom (see abstract).

The patent fails to disclose that the electric field is below that required to coalesce the water droplets.

Prestridge discloses the claimed method of removing particular solids from an oil based fluid exposing the fluid to an electric field and collecting the solids to remove them from the fluid, wherein the water has not completely coalesced (see abstract). The centrifuge removes the water and another material contained in the water.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Burger by the teachings of Prestridge.

One having ordinary skill in the art would have been motivated to do this modification, because the Prestridge patent teaches the application of sufficient electrical field to begin coalescing followed by the centrifuge. The use of a lower current usage would result in an economic advantage allowed by the use of the Prestridge method.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
